

**NC STATE UNIVERSITY**

## **Maintaining Permeable Interlocking Concrete Pavement (PICP): A Hands-On Demonstration**

**May 29, 2009 - Chicago area, IL**  
The Morton Arboretum, Thornhill Auditorium  
4100 Illinois Route 53  
Lisle, IL 60532-1293

### **Cost**

Early bird registration (on or before May 15, 2009): **\$65**  
Regular registration (after May 15, 2009): **\$95**

### **About the workshop**

The Interlocking Concrete Pavement Institute (ICPI) announces a PICP maintenance demonstration workshop in the Chicago area on May 29th. This workshop will demonstrate different PICP surface cleaning techniques and their effectiveness. This is a very common question asked by PICP designers and project owners and there will be some substantive answers at this event.

As Low Impact Development (LID) use continues to increase, a better understanding of the technologies that are incorporated into LID is needed. One of the "up-and-coming" technologies for use across the USA is Permeable Interlocking Concrete Pavers or PICP. Like all stormwater practices, PICP needs to be maintained. Research has shown that with relatively simple and reliable maintenance, this practice will continue to reduce runoff and clean water. This workshop will provide an overview of PICP, discuss recently completed permeable pavement maintenance research, introduce maintenance needs and equipment, and end with a demonstration of various maintenance techniques including street sweeping, stain removal, and vegetation control.

This workshop is sponsored by: NC State University Department of Biological & Agricultural Engineering, NC Cooperative Extension, Interlocking Concrete Pavement Institute, Advanced Pavement Technology, and The Morton Arboretum.

### **Who Should Attend**

- Engineers
- Landscape Architects
- Water Quality and Stormwater Administrators
- Land Surveyors
- Regulators
- Planners
