Leadership in Low Impact Development (LID) Recognition Program

Has your LID project made a difference in your community?

LID is a stormwater management strategy concerned with maintaining or restoring a site to achieve natural resource protection through small, cost-effective site design and landscape features distributed throughout the site.

Recognition Program: Through a Cooperative Agreement between EPA's Mid-Atlantic Region and the Low Impact Development Center, Inc. a new program has been developed that will serve as a leadership model for LID recognition programs across the country. The geographic scope of this new program is currently limited to projects/programs conducted in the EPA Mid-Atlantic Region (District of Columbia, Delaware, Maryland, Pennsylvania, Virginia, and West Virginia). The chosen projects/programs will be showcased on EPA's and other panel member websites.

Goal: The primary goal of this effort is to establish a forum in which innovative and sustainable stormwater management planning, design and program management efforts receive recognition. This model recognition program will provide the opportunity for a diverse group of organizations to present and promote their programs to a variety of audiences.

Bioretention Cell at US EPA Headquarters

Project/Program Categories:

- Codes and Ordinances
- Technology and Pilot Projects/Programs
- Visionary Projects/Programs
- Leadership in Government Initiatives
- Leadership in Non-Government Organization (NGO) Initiatives
- Research
- Educational Programs
- Built projects
- Corporate and Private Sectors
- Institutional
